# Hack-Nocturne '26

Through the night Ideas take flight

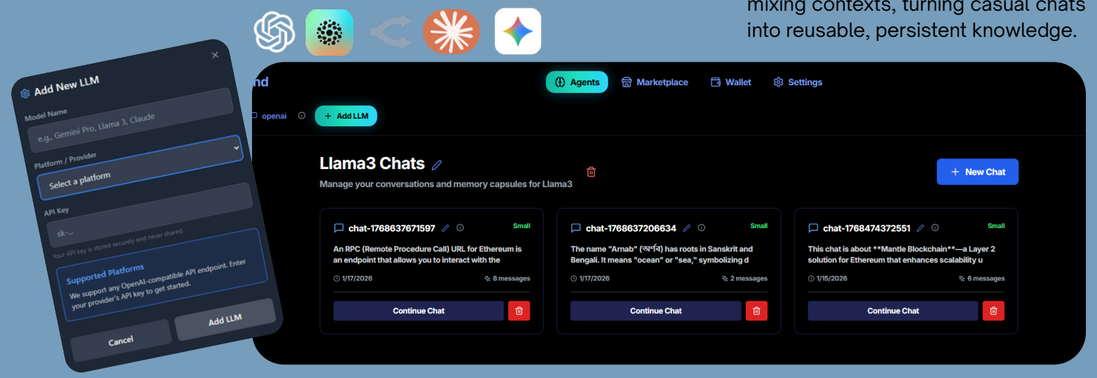
Problem

Idea we'd like to build

1

# WE HELP YOU EARN FROM YOUR PROMPTS.

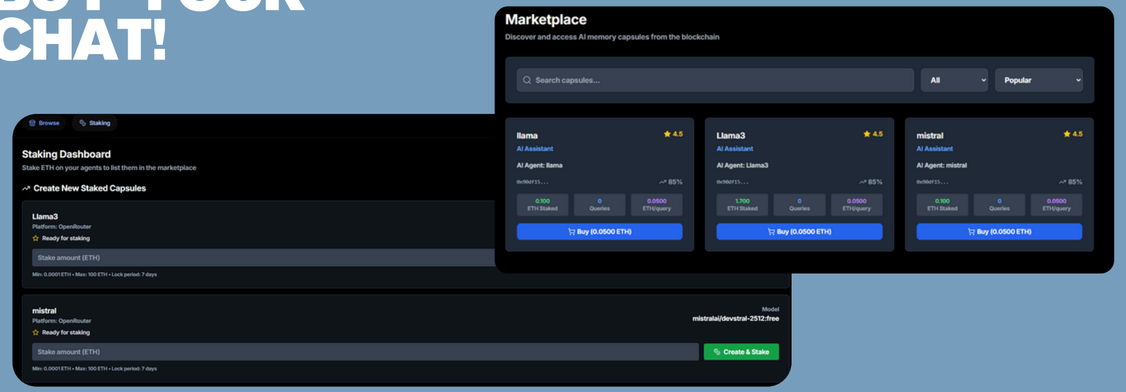
This page is the agent workspace, where a user attaches an LLM to an agent and runs multiple parallel chats, each acting as an isolated memory capsule. It lets intelligence grow across conversations without mixing contexts, turning casual chats into reusable, persistent knowledge.



# STAKE YOUR CHATS! EARN REPUTATION WHEN PEOPLE BUY YOUR CHAT!

When intelligent chats become products, you're buying access, not ownership. You can query an agent's accumulated intelligence via SDK or UI without retraining or fine-tuning, instantly benefiting from its learned context and reasoning. Creators earn every time their agent is used, while staking signals confidence, boosts discoverability, and builds reputation as more users query it and leave feedback—turning intelligence into a compounding, monetizable asset used seamlessly across apps and APIs.

2



# MAKE AGENTS USING OUR SDK!

```python
from anymind import Agent

# Initialize agent with wallet address for authentication
agent = Agent(
    agent_id="custom-b06c4cf5",
    chat_id="872a89c7-181d-405e-a20a-01dd539e7e69",
    wallet_address="0x90df1528054FFccA5faE38EC6447f1557168620E",
    base_url="https://anymind.onrender.com"  # Optional: defaults to http://localhost:
)

# Send a message to the agent
# The message is saved to chat history and memory is automatically updated
response = agent.chat("Take the decisions pasted from {idea.txt} and let me know.")

print(response)
```

agent_id

chat_id

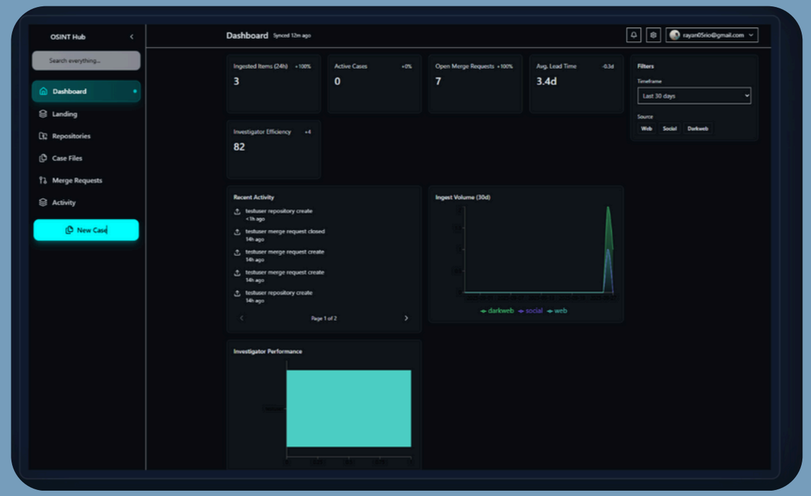
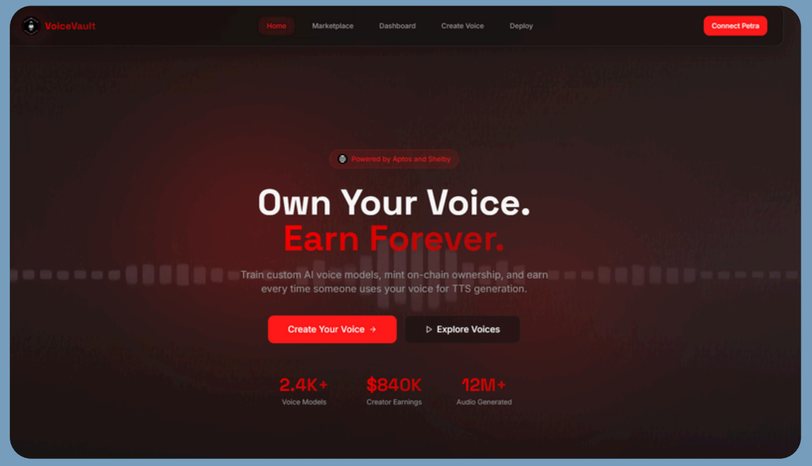
AI PLUGIN FOR BLENDER- **LINK**

**MY TEAM SPANS FROM FULL STACK TO AI EXPERTISE, TO WEB3 ENTHUSIASTS!**

# LINK

AI powered version control system for Legal and Intelligence operations in a collaborative, secure way on investigations.





# LINK

VoiceVault is a decentralized platform for creating, owning, and monetizing AI voice models. Upload your voice, train custom AI models, and trade voice NFTs on the Aptos blockchain.

# ACHIEVEMENTS:

December 1,2025
**The Open Hack, TON 2025 (Top 10 - globally)**
Online
A TON-based decentralized marketplace that uses AI-driven merchant insights to deliver instant tokenized commerce for local businesses.
**Offered a position at Developer Experience Program, TON Foundation.**
LocalPay

November 29,2025
**Build on Aptos, Bangalore (Winner)**
Bangalore
Built a decentralized platform for creating, owning, and monetizing AI voice models on Aptos.
VoiceVault

November 28,2025
**Monad Blitz, Bangalore (Top 10)**
Bangalore
AI-powered murder mystery game where every case is unique — powered by advanced AI and verified on Monad blockchain.

October 1st, 2025
**Robocell Ideathon - Winner**
Bangalore

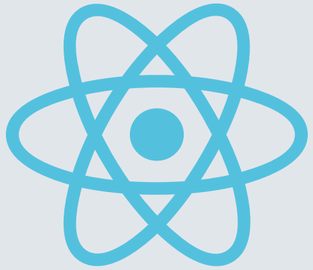
May 5, 2025
**NMIT Ideathon - Winner**
Bangalore

March 2025
**Techathon, Morgan Stanley - Winner**
Bangalore, India
Built an AI Plugin for Blender :)
Post

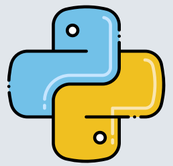
March 2025
**Hackzion V2, AMC Engineering College - Winner**
Bangalore, India
A Web3-powered ticketing platform using SFTs to kill ticket scams, enable transparent resales, and auto-enforce fair profit-sharing and refunds via smart contracts.
Post

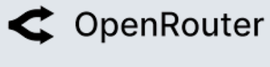
# Tech-Stack & Platforms You Mostly Build On

## Frontend / Backend



## AI & ML Stack





## Cloud / DevOps / Tools

## Blockchain & Web3 / Cybersecurity

# Thank you

Good Luck 👍
